Early Club Member Attendees to the Gold Coast /Tweed Yearly Show Event

PRESIDENTS PEN

Presidents message at the end of April 2024

Hi all, welcome to this month's Presidents message.

The run we had in early April was to "Mopar's on the Coast" organised by the Gold Coast Tweed Chrysler Club and held at Boatworks Drive, Coomera. Despite very ordinary weather there was a great turn out of about 40 cars. There is a museum there named Garage 25 and plenty of food and drink outlets, all had a good time. Representing our club were 11 members in 6 cars.

I was unable to attend the April event as I was once again down south, this time for my dad's 97th birthday in Melbourne. I just got home last night which is always a nice feeling. On the trip home I called in at the Grenfell Chrysler Museum run by Jeff Connelly. Jeff welcomed Sue and I and showed us his collection of Chryslers from the 1930's to modern day US models. Jeff is very informative and has a great cross section of Chrysler cars, signs, spare parts and memorabilia to look at. Even Sue enjoyed the visit and Jeff's hospitality! The museum is a must if you find yourself down Grenfell way.

Expo planning is now underway for this year's event to be held on Sunday September 8th. We are working on the flyer which will include updated information for this year's event including mention of the attendance of the Historical Motor Cycle Club of Qld (HMCCQ) who will hold their annual event at Expo. This should give us another great display of 60 motorcycles and will draw the people who attend motorcycle events to Expo swelling out foot traffic even more, should be a big event in 2024.

Our upcoming club run over 3 days to Lake Redbrook (near Childers) on May 18th to 20th is fully booked with 12 people registered. The trip will include a day trip to Bundaberg to visit a car wreckers with 50 Chryslers in various states of repair (distress??). Jason from PlumKrazy Garage is also working with us to organise a run with the local East Coast Chryslers and Classics Club, the Bundaberg distillery or Brewery may be included as well, should be a great trip!

Looking forward to seeing you all at the May club meeting on the 15th. Bring along your swap items or other Chrysler related gear to foster more discussion between members. As usual the Expo meeting begins at 6.30pm followed by the regular club meeting at 7.30pm. Come along and get involved so we can deliver more interesting events and activities for you and all members.

Well, it's off to the shed to crank up the Chryslers and give them a run after being dormant for a few weeks. The old problem of fuel draining (or evaporating?) from the carby means quite a few cranks before I get a start. What are others doing to remedy this? An electric fuel pump maybe? Let me know your thoughts.

Enjoy your Chryslers people, cheers for now.

APRIL RUN TO GOLD COAST/TWEED CHRYSLER CLUB EVENT

ENVIRONMENTAL UPDATE #2

Common spark plug conditions

NORMAL
Symptoms: Brown to grayish-tan color and slight electrode wear. Correct heat range for engine and operating conditions.
Recommendation: When new spark plugs are installed, replace with plugs of the same heat range.

WORN
Symptoms: Rounded electrodes with a small amount of deposits on the firing end. Normal color. Causes hard starting in damp or cold weather and poor fuel economy.
Recommendation: Plugs have been left in the engine too long. Replace with new plugs of the same heat range. Follow the recommended maintenance schedule.

TOO HOT
Symptoms: Blistered, white insulator, eroded electrode and absence of deposits. Results in shortened plug life.
Recommendation: Check for the correct plug heat range, over-advanced ignition timing, lean fuel mixture, intake manifold vacuum leaks, sticking valves and insufficient engine cooling.

CARBON DEPOSITS
Symptoms: Dry sooty deposits indicate a rich mixture or weak ignition. Causes misfiring, hard starting and hesitation.
Recommendation: Make sure the plug has the correct heat range. Check for a clogged air filter or problem in the fuel system of engine management system. Also check for ignition system problems.

PREIGNITION
Symptoms: Melted electrodes. Insulators are white, but may be dirty due to misfiring or flying debris in the combustion chamber. Can lead to engine damage.
Recommendation: Check for the correct plug heat range, over-advanced ignition timing, lean fuel mixture, insufficient engine cooling and lack of lubrication.

ASH DEPOSITS
Symptoms: Light brown deposits encrusted on the side or center electrodes or both. Derived from oil and/or fuel additives. Excessive amounts may mask the spark, causing misfiring and hesitation during acceleration.
Recommendation: If excessive deposits accumulate over a short time or low mileage, install new valve guide seals to prevent seepage of oil into the combustion chambers. Also try changing gasoline brands.

HIGH SPEED GLAZING
Symptoms: Insulator has yellowish, glazed appearance. Indicates that combustion chamber temperatures have risen suddenly during hard acceleration. Normal deposits melt to form a conductive coating. Causes misfiring at high speeds.
Recommendation: Install new plugs. Consider using a colder plug if driving habits warrant.

OIL DEPOSITS
Symptoms: Oily coating caused by poor oil control. Oil is leaking past worn valve guides or piston rings into the combustion chamber. Causes hard starting, misfiring and hesitation.
Recommendation: Correct the mechanical condition with necessary repairs and install new plugs.

DETONATION
Symptoms: Insulators may be cracked or chipped. Improper gap setting techniques can also result in a fractured insulator tip. Can lead to piston damage.
Recommendation: Make sure the fuel anti-knock values meet engine requirements. Use care when setting the gaps on new plugs. Avoid lugging the engine.

GAP BRIDGING
Symptoms: Combustion deposits lodge between the electrodes. Heavy deposits accumulate and bridge the electrode gap. The plug ceases to fire, resulting in a dead cylinder.
Recommendation: Locate the faulty plug and remove the deposits from between the electrodes.

MECHANICAL DAMAGE
Symptoms: May be caused by a foreign object in the combustion chamber or the piston striking an incorrect reach (too long) plug. Causes a dead cylinder and could result in piston damage.
Recommendation: Repair the mechanical damage. Remove the foreign object from the engine and/or install the correct reach plug.

Save the planet and use your fossil fuels wisely, your savings can go toward a gift to your partner or an additional classic car.

CHRYSLER TRIVIA #4

The LA318 cubic inch V8 was the only V8 available when the VF series Valiant was released in March 1969, replacing the discontinued 273 cubic inch engine used on AP6, VC and VE models. This engine first appeared in Australia in the 1967 model DC6H41 Dodge Phoenix.

Chrysler Australia offered two versions of this engine on the VF – a standard 210hp offered as an option on all model VFs except Regal 770, 2 door hardtop coupes and Chrysler VIPs. These had the hi-performance 230hp “Fireball” engine as an option. VF Regal 770 was only available with this engine.

The engine number prefix on the 210hp was F6 and the 230hp F6P.

The VF was the only model that used the two versions of the LA318s. All subsequent models only used the 230hp “Fireball”.

The VF model hardtop coupes were released several months after the initial VFs, in September 1969. Along with the 230hp “Fireball” V8s, the coupes were only available with the 160hp hi-performance slant six engine with a two barrel carburetor, higher lift camshaft and larger diameter exhaust. This engine was also standard equipment on VF Chrysler VIPs.

The 145hp slant six was the standard engine on all other model VFs, with the 160hp engine an option at extra cost.
